Preface

This publication contains abstracts and indexes to selected materials related to wastewater treatment and water quality education and instruction. In addition some materials related to pesticides, hazardous wastes, and public participation are included. Also included are procedures to illustrate how instructors and curriculum developers in the water quality control field can locate instructional materials to meet very general or highly specific requirements in their programs.

Supplements to this publication will be issued periodically.

For further information about these materials contact:

EPA Information Dissemination Project
1200 Chambers Road
Columbus, Ohio 43212

Phone: 614-422-6717

I. General Information about Materials in IRIS.

A. What types of materials are included in IRIS?

The EPA Information Dissemination Project (water) acquires, reviews, indexes, and announces both print (books, modules, units, etc.) and non-print (films, slides, video tapes, etc.) materials related to water quality and water resources education and instruction.

Materials selected must be available from some source for announcement. When materials are not readily available we attempt to make the materials available through some national information service for easier acquisition. In a few cases the EPA Information Dissemination Project is the source of the materials.

B. How are materials entered into IRIS?

We request that people assist us in locating materials for the system. If you have materials you believe to be useful to others, please send two copies if possible to the:

EPA Information Dissemination Project
1200 Chambers Road
Columbus, Ohio 43212

Materials are reviewed by the project staff. Availability of the material is checked, and the materials are abstracted and indexed. The abstract describes the contents of the material. The index terms (descriptors) are concepts or terms used to describe the contents and the form of the document. (See the Subject Index for a listing of those that have been used.) The index terms are useful for locating materials manually, such as with this compilation, and also by computer.

When items are processed they are entered on the IRIS (water) computer tape. This tape is maintained by the EPA Information Dissemination Project at The Ohio State University and is used for producing tapes for other information systems, publications, and for computer searches conducted at The Ohio State University.

C. How can a user locate materials in IRIS?

1. All materials placed in IRIS (water) Collection.

Materials entered into the IRIS (water) collection can be located in two ways: (1) by manual search of this compilation and similar ones to follow and (2) by computer.

The first compilation contained resumes of selected materials processed for the previous IRIS (water) collection and resumes of selected materials of items added to the IRIS (water) collection. A limited number of copies of the compilation in paper copy and microfiche are available free of charge as long as the supply lasts from the EPA Information Dissemination Project. After the free copies of the compilations are gone, copies will be available for purchase from the EPA Information Dissemination Project.

Quarterly updates of the compilation are available by subscription on a yearly basis beginning November, 1979. Information regarding an annual subscription to IRIS (water) Quarterly Compilations can be obtained by writing to the EPA Information Dissemination Project. A subscription to the quarterly supplements for 1979-80 is $12.00 (within the U.S.). Price to Canada is $14.00. Prices in other countries is $20.00. Separate quarterly supplements are $4.00 each.

The compilation and the quarterly supplements can be scanned and the subject index can be used for manual searches.

Computer tapes of the IRIS (water) collection can also be searched by both batch and on-line computer searches. The IRIS tapes are available for purchase from the SMEAC Information Reference Center. In addition, the IRIS tapes are available for searching through the Bibliographic Retrieval Services, Inc., (BRS). Any search service that currently subscribes to BRS is able to search the IRIS data base by on-line techniques. Individuals or agencies with computer terminals and telephone connection equipment can subscribe to BRS and do their own searches if they desire. Current plans are to update the IRIS tapes every three months.

Information regarding BRS may be obtained by writing or phoning BRS, Corporation Park, Building 702, Scotia, NY 12302, (518) 374-5011.

Plans are being made to mount IRIS tapes with other on-line vendors. Information regarding this service will be announced in a future EPA IRC Bulletin and in mailings from the EPA Information Dissemination Project.

2. Materials placed in the Educational Resources Information System (ERIC)

A number of the materials processed for the IRIS (water) system are entered into the ERIC system and announced in Resources in Education (RIE). Resources in Education (RIE) is published monthly and is available from:

Superintendent of Documents
U.S. Government Printing Office
Washington, DC 20402

The current price is listed in the most recent issue of RIE. Check if a college or university library close to you has a copy. If they do not contact the EPA Information Dissemination for assistance.

Many libraries subscribe to RIE. Materials announced in RIE can be searched manually each month by scanning RIE or by checking the index terms in the back of each issue. Materials announced in RIE can be searched by computer also. ERIC computer tapes may be purchased outright, but most users of the tapes gain access to them through three major database vendors, Lockheed (Dialog), Systems Development Corporation (Orbit), and Bibliographic Retrieval Services. For the addresses of search services in your state that can search these databases, contact the:

EPA Information Dissemination Project
1200 Chambers Rd., Room 310
Columbus, Ohio 43212

Most of the materials announced in RIE are available on microfiche (microfilm) at over 700 sites throughout the United States and the world. Users can view these materials on site at many locations to identify what they believe will be useful to them at no cost. Microfiche copies (or in most cases Xerox copies) can be ordered through the ERIC Document Reproduction Service. The address and order information is in the back of each issue of RIE. Xerox copies of many items related to water quality and resource education and training can also be ordered through the EPA Information Dissemination Project for 3¢ per page + $1.00 per document.

For information about locations of ERIC microfiche sites in your state, contact the EPA Information Dissemination Project.

A number of journal articles processed for the IRIS (water) system are entered into the ERIC system and announced in Current Index to Journals in Education (CIJE).

Current Index to Journals in Education is published monthly and is available from:

ORYX Press
3930 East Camelback Road
Phoenix, Arizona 85018

Many libraries subscribe to CIJE. Materials announced in CIJE can be searched manually each month by scanning CIJE or by checking the index terms in the back of each issue. Materials announced in CIJE can be searched by computer also. Refer to the previous discussion of RIE concerning computer searches.

Materials announced in CIJE can be located in journals at many university libraries.

Many of the articles can be obtained from University Microfilms. Current prices are $6.00 for articles published before January 1976 and $4.00 for articles published after January 1976. For further information write to:

B. How to Locate Desired Materials

Users can identify materials of interest by scanning the resume listings, or using the Subject Index, Author Index, Institution Index, or Title Index.

1. Subject Index

The Subject Index is designed to enable the user to search for information on either a broad subject or a narrow information concern. An EW number is included for each item listed under the subject heading. The EW number refers to the abstract entry in the resume section where complete bibliographic information, an abstract of the item, and availability information can be found.

A user can also coordinate a search by checking EW numbers that appear under two or more subject headings. For example, you could check all the EW numbers under Water Treatment and all the EW numbers under Films. EW numbers included under both subject headings would include information relevant to Water Treatment that were films. EW numbers under wastewater treatment and laboratory techniques would provide a list of materials related to laboratory techniques and to wastewater treatment. Similar techniques could be used to identify other information desired.

Users with ERIC microfiche should check the resume entry. If the document is available on microfiche from the ERIC Document Reproduction Service, the availability will be indicated by "MF" on the resume by "EDRS Price." This means libraries with ERIC microfiche collections should have the document on microfiche.

If you want a document available through the ERIC Document Reproduction Service (EDRS) see the section on ordering documents.

2. Author Index

If you desire to locate a document by the name of the author, you can use the Author Index. EW numbers are provided under the author in the Author Index as in the Subject Index. Some documents do not have a listed author; hence they are not listed in this index.

3. Title Index to the IRIS Compilation (Not included in the compilation)

The Title Index to the IRIS Compilation is a separate document. It is available from the EPA Information Project for $5.00 prepaid or $5.00 plus postage if invoiced. Supplements will be available on an annual basis for $5.00 beginning in January, 1981.

The Title Index contains all titles in the compilation listed in alphabetical order. If you are searching for material and know the title, you can check the title list to determine if the item is in the IRIS data base. Each title includes the IRIS resume number. The number can be found in the resume section of the compilation.

III. Correcting an Existing IRIS Record

The IRIS data base will be updated on a quarterly basis. Corrections will be made to the data base at those times. You can help improve IRIS by sending corrections for items you find to be in error.

We request that you duplicate (copy) the resume from the compilation, mark the information you believe to be wrong (or incomplete), and send the marked resume to:

EPA Information Dissemination Project
1200 Chambers Road, Rm. 310
Columbus, OH 43212

Corrections of errors will occur in the IRIS tapes at the next update after comments are received.

If you have difficulty obtaining materials from the listed source in the AVAILABILITY section of the resume, please let us know. We will contact the souces to verify whether the materials are available, but your assistance will provide corrections between annual availability checks.

If you are the supplier of materials in IRIS, please let us know if you remove a product from your list, modify a product on your list, or change the price of the product.

IV. Requests to Receive Information about IRIS and the IRC Bulletin

Information regarding IRIS, materials in IRIS, and modifications in the system will be announced in the IRC Bulletin. The Bulletin is issued about six times a year as information is available.

If you are not on the mailing list write to the EPA Information Dissemination Project. Limited numbers of some back issues are still available.

If you need information about IRIS you can also phone 614-422-6717 with your questions.

V. Requests for Assistance in Using IRIS

A. Assistance in use of IRIS manuals.

If you need help in using the IRIS manuals phone 614-422-6717 or write to the EPA Information Dissemination Project. Staff are normally available from about 8:30 a.m. to 4:30 p.m. Eastern time to answer your questions.

B. Assistance in accessing IRIS by computer

1. Conducting searches.

   See section VIII.

2. Subscribing to BRS, Inc. for computer searching of IRIS

   Contact: Bibliographic Retrieval Services, Inc.
   Corporation Park, Building 702
   Scotia, New York 12302

   Phone: 518-374-5011

3. Contacting a computer search service (an agency that will conduct a search for you, usually for a fee)

   The EPA Information Dissemination Project maintains a list of agencies that can conduct searches. Most charge a fee, though some are free to qualified users in a limited geographical area.

   Phone or write to obtain information for your area.

VI. How to Locate Other Relevant Educational Materials

A number of people have requested information related to such areas as management, basic skills (reading, mathematics, writing) human relations, contract negotiations, and other topics. The EPA Information Dissemination Project plans to develop some user service products in selected areas in 1980.

Another excellent source of information for many educational concerns is the ERIC System.

ERIC is a national information system designed and developed by the U.S. Office of Education, and now supported and operated by the National Institute of Education (NIE), for providing ready access to descriptions of exemplary programs, research and development efforts, and related information that can be used in developing more effective educational programs.

There are 16 Clearinghouses in the nationwide ERIC network. Each specializes in a different, multi-discipline, educational area. Each searches out pertinent documents.

The ERIC Clearinghouses have responsibility within the network for acquiring the significant educational literature within their particular areas, selecting the highest quality and most relevant material, processing (i.e., cataloging, indexing, abstracting) the selected items for input to the data base, and also for providing information analysis products and various user services based on the data base.

The 16 ERIC Clearinghouses are listed on the next few pages, together with addresses, telephone numbers, and brief scope notes describing the areas they cover. You can contact them for assistance in locating information relevant to their scope notes.

In many cases, a local school administrator or school librarian can help you locate assistance.

VII. How to Structure a Computer Search of IRIS

This explanation relates to the IRIS data base that can be searched on-line through Bibliographic Retrieval Services, Inc. As IRIS becomes available through other sources, information relevant to those services will be provided.

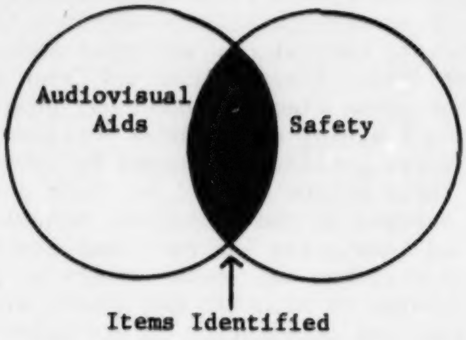
A few notes about the service are important. The following fields are searchable by computer: (1) IRIS Accession Number (EW number), (2) ERIC Accession Number (ED number), (3) Authors, (4) Institution (5) Title, (6) subject index terms, and (7) abstract.

If you submit a search of IRIS through BRS, the program will search for the words you select in three fields unless the searcher requests to limit the search. These fields are: (1) the title field, (2) the subject index field, and (3) the abstract. We recommend you use this feature especially for searches on specific terms. If you find more material than you want by this technique you can narrow the search to items that may have the most information on the topic by limiting the search to the subject index field.

Several sample searches are listed.

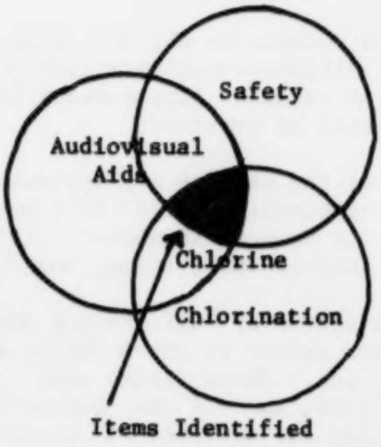
A. Sample 1

If you want to locate audiovisual aids that relate to safety you would submit a search with audiovisual aids and safety. Materials that included the terms both audiovisual aids and safety in the title field, the abstract, and the subject index field would be identified by the computer.



Audiovisual Aids
Safety
Items Identified

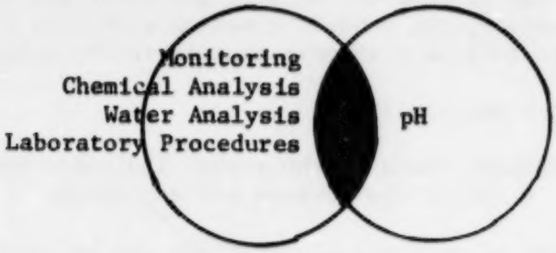
The computer program can tell you the number of items, the title of the items, or print the entire resume of each item. If you were primarily interested in audiovisual aids, safety, and chlorine you would submit a search of these three terms. You might want to include chlorides and chlorination as well as chlorine in the search. This search would identify materials that contained audiovisual aids, safety, and one or more of the words, chlorine, and chlorination.



Safety
Audiovisual Aids
Chlorine
Chlorination
Items Identified

B. Sample 2

If you want to identify materials related to monitoring, you should include several related terms and the chemical, material, or situation that is being monitored. See the example below.

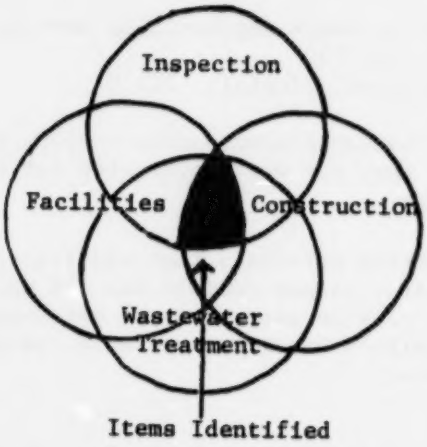


Monitoring
Chemical Analysis
Water Analysis
Laboratory Procedures
pH

This search would identify all the items that included any of the terms on the left and pH.

C. Sample 3

If you are interested in materials related to inspection and construction you could conduct a search of these two terms. The search would identify all materials that included both terms. If you were interested in only wastewater treatment facilities you could construct a search as diagrammed.



Inspection
Facilities
Construction
Wastewater
Treatment
Items Identified

This search would yield specific materials and demonstrates how a computer search can help you locate materials you want.

D. Use of the Subject Index

The subject index in the back of the compilation can be used to help you decide if you want to do a computer search. If there are relatively few entries, you can check the resumes in the resume section. If there is a large number of entries (perhaps 50 or more) you may want to use a computer search.

As the data base gets larger, you will find more entries for subject index terms and computer searching will offer more advantages.

The subject index can also be used to help you select words to include in a search. Words listed in the subject index are certain to be in the searchable fields. Therefore, selecting these terms to use in structuring a search will increase the probability of locating materials. Some words will appear in the title or abstract that are not included in the subject term field. Such words can be used to check if any materials are in the data base. If, however, you conduct a search with such a word it is usually best to include a synonym that _is_ in the subject index.

VIII. How to Order Materials

The AVAILABILITY field in the resume indicates where materials can be obtained. A few of the sources are explained.

A. A number of audiovisual materials can be obtained on loan from the EPA National Training and Operational Technology Center, Cincinnati, Ohio 45268. They also offer a copy service to reproduce materials at a very reasonable price.

B. Some of the materials are available through the ERIC Document Reproduction Service. MF (microfiche) are 4" x 6" sheets of microfilm; up to 96 pages of text can be reproduced on one sheet. HC (paper copy) is a reproduction of the document in paper form at the original size.

Order forms for these materials can be obtained from:

ERIC Document Reproduction Service
P.O. Box 190
Arlington, Virginia 22210

C. The EPA Information Dissemination Project will provide xerox copies of materials that are not copyrighted for $1.00 per document plus $0.03 per page.

If you can not obtain materials that are listed or have difficulty obtaining materials, please contact the EPA Information Dissemination Project. We can provide assistance in obtaining materials from some sources. If materials become unavailable, we will remove them from the IRIS data base.

IX. USEPA
National Training and Operation Technology Center
Cincinnati, Ohio 45268

To fulfill national educational and training requirements, USEPA has organized the National Training and Operational Technology Center (NTOTC). NTOTC has the responsibility for planning, developing, conducting and evaluating USEPA's water pollution control training and education program. As an instructional resource, its purpose is to help regions, states, local governments and educational institutions to become knowledgeable about USEPA's goals, regulations, strategies, as well as the implications of USEPA programs which affect virtually everyone.

Activities encompass three categories: (1) instruction; (2) course development; and (3) information management.

Instruction--NTOTC offers a variety of training courses in water quality control. Such courses are taught at many locations, but most are presented at the Environmental Research Center in Cincinnati, Ohio. A current project will expand this effort to enable more environmental personnel to receive specialized instruction. Area training centers will soon act as satellites to the NTOTC program, offering similar courses and instructional support. Select universities with broad pollution control curricula will act as area training centers within a region. As a result, more pollution control personnel will have access to needed specialized training.

Since 1971, the NTOTC professional staff of chemists, biologists and engineers has presented nearly 350 courses to more than 8,000 students. Courses are offered throughout the year, and are designed to help participants understand current pollution control techniques and procedures. As USEPA regulations and policies are implemented, based in large part on USEPA research, courses are offered by NTOTC staff to upgrade knowledge and develop specific skills or procedures.

Some courses are conducted at wastewater treatment plants, enabling USEPA to work directly with plant personnel to improve treatment plant effluent. While working on site at treatment plants, staff can diagnose and discuss particular problems and can provide information on design and operation to many technicians within the local region.

Courses currently are offered in five general categories: wastewater treatment technology, treatment facility evaluation and inspection, water quality surveillance and monitoring, water quality analysis, and drinking water quality monitoring.

Students attend courses from all states, and from some foreign countries. The largest percentage represent federal, state, and municipal pollution control agencies. A relatively small number of college and university instructors attend these short courses which are typically one week in length. USEPA encourages more participation by the educational community, so that current skills and knowledge will be transmitted to students to enable them to deal with pollution control problems as they enter environmental occupations. Community college and university instructors may attend courses free of charge by following prescribed application procedures.

Course Development--NTOTC is active in the field of course development. As new educational and training needs are identified, appropriate instructional packages are developed. Almost all such development is based on current research and agency regulations. Materials include instructor guides, student manuals and supporting audiovisual materials. If USEPA's pollution control training programs are to be successfully implemented, college and university staff from various departments must cooperate and integrate these instructional activities within their curriculums; or students will not be adequately prepared, either theoretically or practically.

Information Management--The goal of USEPA's information management system is to support, in a comprehensive and systematic manner, those involved with pollution control education and training. A central location within the NTOTC facility is designed to provide a contact point and to coordinate assistance efforts and has been designated the Instructional Resources Center (IRC).

As the education and training community has become more aware of the types of programs operated by the IRC, requests for information have expanded dramatically. Many requests for assistance from instructors, information specialists, municipal water and wastewater treatment plant trainers, and representatives of government and business have been received.

Through the IRC, NTOTC maintains a central location to inventory, evaluate, catalog and disseminate instructional materials in the areas of water pollution control, water supply, and pesticides. Composed of several different but interrelated activities, it acts as a primary communications link between USEPA and educators at all post-secondary levels.

The IRC includes an audiovisual lending library housing slide/tape presentations, films and videotapes, all available for free, short-term loan. Most subject areas available are water quality-oriented.

Interested persons are invited to Cincinnati to use IRC facilities for reviewing tapes, slides, films, and other materials before deciding about purchases or curriculum development requirements. IRC staff assist visitors by determining the most appropriate ways to use the Center's resources, or in determining educational and training program requirements and available resources. During the past year, universities and state and local governments have been assisted with curriculum design, course materials selection, and audiovisual support efforts.

ABSTRACT: THIS BOOK EXAMINES BOTH THE BENEFITS AND RISKS OF PESTICIDES AND COMPARES THEM AGAINST EACH OTHER. THE VALUE OF PESTICIDES TO THE U.S. NATIONAL ECONOMY AND WELL-BEING IS MEASURED AGAINST THE RISKS OF POSSIBLE HARM TO THE ENVIRONMENT. THE AUTHOR ADVOCATES THE USE OF COST BENEFIT ANALYSIS TO DETERMINE WHAT RESTRICTIONS OR PROHIBITIONS SHOULD BE PLACED ON THE USE OF A PARTICULAR PESTICIDE. HE ALSO POINTS OUT THAT THE RESULT OF A COST BENEFIT ANALYSIS FOR A PARTICULAR PESTICIDE IN ONE COUNTRY MAY NOT BE THE SAME AS THAT IN ANOTHER COUNTRY, AND THAT THE FACTORS OF THE EQUATION MIGHT BE TOTALLY DIFFERENT IF THE FOOD AND HEALTH NEEDS OF THE DEVELOPING COUNTRIES ARE CONSIDERED. VIEW POINTS OF THE MANUFACTURER, FARMER, FOOD PROCESSOR, CONSUMER, PUBLIC, AND GOVERNMENT ARE PRESENTED ALONG WITH A DISCUSSION OF ALTERNATIVES TO PESTICIDE USE.

ABSTRACT: THIS BOOK EXAMINES BOTH THE BENEFITS AND RISKS OF PESTICIDES AND WEIGHS THEM AGAINST EACH OTHER. THE VALUE OF PESTICIDES TO THE U.S. NATIONAL ECONOMY AND WELL-BEING IS MEASURED AGAINST THE RISKS OF POSSIBLE HARM TO THE ENVIRONMENT. THE AUTHOR ADVOCATES THE USE OF COST BENEFIT ANALYSIS TO DETERMINE WHAT RESTRICTIONS OR PROHIBITIONS SHOULD BE PLACED ON THE USE OF A PARTICULAR PESTICIDE. BUT HE ALSO POINTS OUT THAT THE RESULT OF A COST BENEFIT ANALYSIS FOR A PARTICULAR PESTICIDE IN ONE COUNTRY MAY NOT BE THE SAME AS THAT IN ANOTHER COUNTRY, AND THAT THE FACTORS OF THE EQUATION MIGHT BE TOTALLY DIFFERENT IF THE FOOD AND HEALTH NEEDS OF THE DEVELOPING COUNTRIES ARE CONSIDERED. VIEWPOINTS OF THE MANUFACTURER, FARMER, FOOD PROCESSOR, CONSUMER, PUBLIC, AND GOVERNMENT ARE PRESENTED ALONG WITH A DISCUSSION OF ALTERNATIVES TO PESTICIDE USE.

PERSONAL AUTHOR: BEATTY, RITA GRAY

DESCRIPTOR: *AGRICULTURAL CHEMICALS; *CHEMISTRY; *DDT; *ECOLOGY; ENVIRONMENT; LEGISLATION; *PESTICIDES; POLLUTION; *PUBLIC EDUCATION; *SAFETY; TRANSPORTATION

DESCRIPTIVE NOTE: 201P.

ABSTRACT: THIS BOOK, WRITTEN BY A PROFESSIONAL JOURNALIST, NOT A SCIENTIST, IS A RESULT OF MORE THAN TWO YEARS OF EFFORT TO RESOLVE THE TWO DDT MYTHS: "DDT IS THE GREATEST BLESSING EVER TO COME OUT OF A CHEMICAL LABORATORY" VERSUS "DDT WILL BE THE BANE OF MANKIND". THIS BOOK COMPARES FACT WITH FANCY; IT POINTS OUT BOTH STRENGTHS AND WEAKNESSES IN MODERN PEST-CONTROL PRACTICES; IT CHIDES THE CAMP FOLLOWER FOR IMPETUOSITY; IT CHIDES THE SCIENTIST FOR TACITURNITY; IT CHIDES THE AGRICULTURAL CHEMICALS INDUSTRY FOR FAILURE TO RECOGNIZE ADEQUATELY THAT THE PUBLIC HAS A RIGHT TO BE INFORMED ON MATTERS AFFECTING THEIR CONTINUED EXISTENCE ON A HOSPITABLE PLANET; IT CHIDES SOME GOVERNMENTAL AGENCIES FOR ELEMENTS OF DUPLICITY AND PROCRASTINATION; AND WITH ONE NOTABLE EXCEPTION IT REBUKES THE NEWS MEDIA FOR A STRONG TENDENCY TO ACCENTUATE THE "BAD" AND TO MINIMIZE THE "GOOD". AMONG THE TWELVE CHAPTERS OF THIS BOOK ARE THE FOLLOWING: "THE MOTHER'S MILK CONTROVERSY", "THE CANCER QUESTION", AND "IS THE SPRING SILENT". FINALLY, THE AUTHOR MAKES TEN RECOMMENDATIONS INCLUDING A RECOMMENDATION THAT "NO BAN ON THE USE, PRODUCTION, OR INTERSTATE SHIPMENT OF DDT BE ALLOWED, BUT RATHER THAT THE USES OF THIS PESTICIDE AND ALL PESTICIDES BE RESTRICTED TO SPECIFIC USES IN DESIGNATED AMOUNTS, AS DETERMINED BY A PANEL OF EXPERTS."

TITLE: CHEMICAL SITE PREPARATION IN THE INLAND EMPIRE.

PERSONAL AUTHOR: STEWART; R.E.
DESCRIPTOR: *CHEMICAL TREATMENT; *ENVIRONMENT; *FOREST PEST CONTROL; FOREST; GRASS; *HERBICIDES; *PESTICIDES

DESCRIPTIVE NOTE: 13P.

ABSTRACT: CHEMICAL SITE PREPARATION IS SUGGESTED FOR ANY SITUATION WHERE COMPETING VEGETATION IS A MAJOR OBSTACLE TO REFORESTATION. IT OFTEN IS LESS COSTLY AND HAS LESS ENVIRONMENTAL IMPACT THAN MECHANICAL CLEARING OR PRESCRIBED BURNING. MOREOVER, HERBICIDES MAY BE PARTICULARLY USEFUL FOR ESTABLISHING CONIFERS IN GRASS COMMUNITIES OR ON SITES SUBJECT TO TEMPERATURE EXTREMES. WHERE NECESSARY TO PROVIDE ACCESS OR TO REMOVE PROTECTIVE COVER FOR SMALL ANIMALS, HERBICIDES MAY BE COMBINED WITH MECHANICAL CRUSHING OR CLEARING OR WITH BURNING TO REMOVE THE DEAD VEGETATION. IN THIS CASE, SPRAYING MAY REDUCE THE COST OF SUBSEQUENT TREATMENT AND PRODUCE BETTER LONG-TERM CONTROL OF COMPETING VEGETATION.

ABSTRACT: THIS 23 MINUTE COLOR FILM WAS PRODUCED IN COOPERATION WITH THE WORLD HEALTH ORGANIZATION AND THE FOOD AND AGRICULTURE ASSOCIATION OF THE UNITED NATIONS. THE PRINCIPAL THEME OF THIS FILM IS "MAN VERSUS THE INSECT". THE FILM VERY BROADLY TOUCHES UPON MANY ASPECTS OF THE WORLD OF INSECTS INCLUDING: 1) PREDATOR/PREY RELATIONSHIPS; 2) METAMORPHOSIS AND DEVELOPMENTAL STAGES; 3) PROTECTIVE COLORATION AND BEHAVIOR; 4) NATURAL POPULATION BALANCES; 5) AND RELATIVE SIZE AND NUMBERS OF INSECTS. THE FILM SHOWS SEVERAL SPECIES OF INSECTS THAT ARE VECTORS FOR HUMAN AND LIVESTOCK DISEASES AND IT OFTEN SHOWS THE RESULTS OF THOSE DISEASES-BLINDNESS, ELEPHANTIASIS, MALARIA, AND SLEEPING SICKNESS. MANY OF THE SCENES FROM THE FILM ARE TAKEN FROM AROUND THE WORLD FROM AREAS WHERE INSECT PROBLEMS ARE SEVERE. ABOUT HALF OF THE FILM IS DEVOTED TO MAN'S COMPETITION WITH INSECTS FOR CULTIVATED CROPS: IN PARTICULAR THE LOCUST PROBLEM IN AFRICA. SCENES SHOW AERIAL SPRAYING AT LOCUST SWARMS WITH INSECTICIDE BUT NO MENTION IS MADE OF THE ENVIRONMENTAL TRADE-OFFS ASSOCIATED WITH SUCH SPRAYING. THE FILM DEPICTS INSECTS AS THE DEADLY ENEMY TO BE DESTROYED WITH THE IMPLICATION THAT INSECTICIDES ARE MAN'S ONLY HOPE IN THIS WAR.
